

The background of the entire image is a dark blue surface with a fine, repeating dot pattern. Scattered across this surface are various surgical instruments, including scalpels, forceps, and probes, some of which are partially visible around the central white box. One instrument in the upper right has the brand name 'Surgitrac' and the model 'SC19' visible on its handle.

TRAN CANULA

Canule de Tran

fabrinal
EYE CARE

The Tran Canula® is a sterile and single use irrigation cannula used by physician in controlled environment to clear the pseudo-exfoliative particles in the anterior chamber of the eye. Unlike a conventional single jet irrigation cannula, this new instrument is characterized by two distinct water jets separated from each other by a 30° angle. Thanks to the unique design of the cannula and the laws of micro-hydrodynamics, these two independent fluid streams merge into one, more powerful, since they touch an obstacle.

TRAN CANULA®, TC- 01, SPECIFICATIONS

- Reference : TC- 01
- Cannula length : 19 mm
- Radius of curvature : 25 mm
- Outside diameter : 0.8 mm
- Design : Dr. V.T. Tran

TRAN CANULA® PACKAGING

- In a double sterile blister pack ; single use only.
- Packaging : 5 pieces
- 205 x 57 x 45 mm

La Tran Canula® est une canule d'irrigation stérile à usage unique utilisée par le médecin dans un environnement contrôlé, pour éliminer les particules pseudo-exfoliatives déposées dans la chambre antérieure de l'œil. Contrairement à une simple canule d'irrigation à jet classique, ce nouvel instrument est caractérisé par deux jets d'eau distincts séparés l'un de l'autre par un angle de 30°. Grâce à sa conception unique et aux lois de la micro-hydrodynamique des fluides, ces deux jets indépendants fusionnent en un seul fuseau liquide, plus puissant, dès lors qu'ils touchent un obstacle.

TRAN CANULA®, TC- 01, SPÉCIFICATIONS

- Référence : TC- 01
- Longueur canule : 19 mm
- Rayon de courbure : 25 mm
- Diamètre extérieur : 0.8 mm
- Design : Dr. V.T. Tran

TRAN CANULA® PACKAGING

- Sous double blister stérile, à usage unique.
- Emballage : 5 pièces
- 205 x 57 x 45 mm

Tran Canula® ist eine sterile Einweg-Spülkanüle, die in kontrollierter Umgebung von Ärzten angewandt wird, um die pseudoexfoliativen Partikel aus der vorderen Augenkammer zu entfernen.

Im Gegensatz zur herkömmlichen Einzelstrahl-Spülkanüle zeichnet sich dieses neue Instrument durch zwei getrennte Wasserstrahlen aus, die zueinander in einem Winkel von 30° stehen. Dank des einzigartigen Designs der Kanüle und aufgrund der Gesetze der Mikrohydrodynamik verschmelzen diese beiden unabhängigen Flüssigkeitsströme zu einem einzigen stärkeren, sobald sie ein Hindernis berühren.

TRAN CANULA®, TC- 01, CHARAKTERISTIKA

- Kennzeichen : TC- 01
- Kanülenlänge : 19 mm
- Krümmungsradius : 25 mm
- Aussendurchmesser : 0.8 mm
- Entwurf : Dr. V.T. Tran
